

Chapter 15

Section 1 Aqueous Solutions and the Concept of pH

Objectives

- Describe the self-ionization of water.
- Define pH, and give the pH of a neutral solution at 25°C.
- Explain and use the pH scale.
- Given $[\text{H}_3\text{O}^+]$ or $[\text{OH}^-]$, find pH.
- Given pH, find $[\text{H}_3\text{O}^+]$ or $[\text{OH}^-]$.

Chapter 15

Section 1 Aqueous Solutions and the Concept of pH

Hydronium Ions and Hydroxide Ions Self-Ionization of Water

- In the **self-ionization of water**, two water molecules produce a hydronium ion and a hydroxide ion by transfer of a proton.

- In water at 25°C, $[\text{H}_3\text{O}^+] = 1.0 \times 10^{-7} \text{ M}$ and $[\text{OH}^-] = 1.0 \times 10^{-7} \text{ M}$.
- The *ionization constant of water*, K_w , is expressed by the following equation.

$$K_w = [\text{H}_3\text{O}^+][\text{OH}^-]$$

Chapter 15

Section 1 Aqueous Solutions and the Concept of pH

Hydronium Ions and Hydroxide Ions, *continued* Self-Ionization of Water, *continued*

- At 25°C,
 $K_w = [\text{H}_3\text{O}^+][\text{OH}^-] = (1.0 \times 10^{-7})(1.0 \times 10^{-7}) = 1.0 \times 10^{-14}$
- K_w increases as temperature increases

| Temperature (°C) | K_w |
|------------------|-----------------------|
| 0 | 1.2×10^{-15} |
| 10 | 3.0×10^{-15} |
| 25 | 1.0×10^{-14} |
| 50 | 5.3×10^{-14} |

Chapter 15

Section 1 Aqueous Solutions and the Concept of pH

Hydronium Ions and Hydroxide Ions, *continued* Calculating $[H_3O^+]$ and $[OH^-]$

- Strong acids and bases are considered completely ionized or dissociated in weak aqueous solutions.

- 1.0×10^{-2} M NaOH solution has an $[OH^-]$ of 1.0×10^{-2} M

- The $[H_3O^+]$ of this solution is calculated using K_w .

$$K_w = [H_3O^+][OH^-] = 1.0 \times 10^{-14}$$

$$[H_3O^+] = \frac{1.0 \times 10^{-14}}{[OH^-]} = \frac{1.0 \times 10^{-14}}{1.0 \times 10^{-2}} = 1.0 \times 10^{-12} \text{ M}$$

Chapter menu

Chapter 15

Section 1 Aqueous Solutions and the Concept of pH

Hydronium Ions and Hydroxide Ions, *continued* Calculating $[H_3O^+]$ and $[OH^-]$

- If the $[H_3O^+]$ of a solution is known, the $[OH^-]$ can be calculated using K_w .

$$[HCl] = 2.0 \times 10^{-4} \text{ M}$$

$$[H_3O^+] = 2.0 \times 10^{-4} \text{ M}$$

$$K_w = [H_3O^+][OH^-] = 1.0 \times 10^{-14}$$

$$[OH^-] = \frac{1.0 \times 10^{-14}}{[H_3O^+]} = \frac{1.0 \times 10^{-14}}{2.0 \times 10^{-4}} = 5.0 \times 10^{-10} \text{ M}$$

Chapter 15

Section 1 Aqueous Solutions and the Concept of pH

The pH Scale

- The **pH** of a solution is defined as the negative of the common logarithm of the hydronium ion concentration, $[\text{H}_3\text{O}^+]$.

$$\text{pH} = -\log [\text{H}_3\text{O}^+]$$

- example: a neutral solution has a $[\text{H}_3\text{O}^+] = 1 \times 10^{-7}$
- The logarithm of 1×10^{-7} is -7.0 .

$$\text{pH} = -\log [\text{H}_3\text{O}^+] = -\log(1 \times 10^{-7}) = -(-7.0) = 7.0$$

Chapter 15

Section 1 Aqueous Solutions and the Concept of pH

The pH Scale

- The **pOH** of a solution is defined as the negative of the common logarithm of the hydroxide ion concentration, $[\text{OH}^-]$.

$$\text{pOH} = -\log [\text{OH}^-]$$

- example: a neutral solution has a $[\text{OH}^-] = 1 \times 10^{-7}$
- The $\text{pH} = 7.0$.
- The negative logarithm of K_w at 25°C is 14.0.

$$\text{pH} + \text{pOH} = 14.0$$

Calculations Involving pH

- There must be as many significant figures to the right of the decimal as there are in the number whose logarithm was found.

- example: $[\text{H}_3\text{O}^+] = 1 \times 10^{-7}$

one significant figure

$$\text{pH} = 7.0$$

Chapter 15 Section 1 Aqueous Solutions and the Concept of pH

Using Logarithms in pH Calculations

It is easy to find the pH or the $[\text{H}_3\text{O}^+]$ of a solution by using a scientific calculator. Because calculators differ, check your manual to find out which keys are used for log and antilog functions and how to use these functions.

1. Calculating pH from $[\text{H}_3\text{O}^+]$

Use the definition of pH:

$$\text{pH} = -\log [\text{H}_3\text{O}^+]$$

- Take the logarithm of the hydronium ion concentration.
- Change the sign (+/-).
- The result is the pH.

2. Calculating $[\text{H}_3\text{O}^+]$ from pH

If you rearrange $\text{pH} = -\log [\text{H}_3\text{O}^+]$ to solve for $[\text{H}_3\text{O}^+]$, the equation becomes

$$[\text{H}_3\text{O}^+] = 10^{-\text{pH}}$$

- Change the sign of the pH (+/-)
- Raise 10 to the negative pH power (take the antilog).
- The result is $[\text{H}_3\text{O}^+]$.
